Commissioner Oettinger stated: "We understand that the ITER project is a historical undertaking and that intensive effort and innovative methods will be required to meet all the challenges that still lay ahead, especially the challenge of staying within a tight but realistic schedule while containing costs."

In this context, the ITER Organization was urged by the ministerial representatives to propose an improved management plan for ITER construction, which will be implemented in close cooperation with the ITER Domestic Agencies.

ITER—designed to demonstrate the scientific and technological feasibility of a tokamak fusion reactor with a power ratio of 10:1.
