

ITER ORGANIZATION
LE MAGAZINE

ITER is a large-scale international project to build a nuclear fusion reactor. The reactor will be built in the south of France, near the town of Cadarache. The reactor will be a tokamak, which is a type of magnetic confinement fusion reactor. The tokamak consists of a large toroidal structure, which is a donut-shaped ring. The reactor will be built on a hillside, and the structure will be made of steel and concrete. The reactor will be built in several stages, and it is expected to be completed by 2035. The reactor will be used to produce energy, and it will be the first of its kind. The reactor will be a major step towards achieving commercial nuclear fusion.
